**What is network maintenance?**

Though largely invisible to the average user, network infrastructure plays a critical role in maintaining business operations and supporting server hardware. Our network maintenance services are designed to ensure business continuity by providing both hardware and software support. Here's a breakdown of the key components of our service:

**What are network support & maintenance services?**

Network support and maintenance services provide businesses with the ongoing management and upkeep of their IT networks, ensuring that they run efficiently, securely, and without disruptions. These services are essential for businesses that rely on a stable and secure network for daily operations, communication, and data management.

**What is maintenance of network equipment?**

Maintenance of network equipment includes the following types of work on hardware and software support: Here our team of experts collect and analyze information about the initial state of the network, install, configure and upgrade. We use approaches to evaluate and find information technologies with a high degree of component efficiency.

**How do I customize my Network Maintenance Service plan?**

To customize your Network Maintenance Service plan with Park Place, select the OEM of your network devices. You can then adjust service levels or add and delete equipment from your IT network maintenance contract at any time. Field Engineer on-site (if required) within 4 hours after customer contact.
