To find the area of a rectangle, you multiply its length by its width. In this case, the length is 7cm and the width is 5cm. So, the area of the rectangle is $7\text{cm} \times 5\text{cm} = 35$ square centimeters.

What is the volume and surface area of a 5cm cube? The volume of a cube is calculated using the formula ($V = a^3$), where (a) is the length of a side. For a 5 cm cube, the volume is (5^3 ...

So, for this rectangle with sides of 9cm and 5cm, the perimeter would be $2(9\text{cm}) + 2(5\text{cm}) = 18\text{cm} + 10\text{cm} = 28\text{cm}$. Just a few simple brushstrokes and you've got your answer!

How many centimeters are in a foot and a half? Since there are 2.54 centimeters in an inch you multiply that times how many inches are in one and a half feet (18), so $2.54 \times 18 = 45.72$ cm.

If the dimensions given are the length and the width, the area is determined by multiplying the length X width ($5 \times 3 = 15$ sq cm).

5 centimeters is approximately 1.97 inches. To convert centimeters to inches, you can use the conversion factor where 1 centimeter is equal to about 0.3937 inches. Thus, multiplying 5 by ...

0.5 cm is equivalent to 5 millimeters, which is about the thickness of a standard credit card. To visualize it, it's roughly half the width of a large paperclip. In inches, 0.5 cm is approximately ...

Oh, isn't that just a happy little conversion! 5 centimeters is like a tiny little tree, and when you convert it to millimeters, it becomes even more detailed, like adding delicate little leaves to your ...

5cm, 5cm, and 5cm could represent the lengths of the sides of an equilateral triangle, or might indicate the length, width, and height of a cube. This is impossible to answer as it depends on ...
