What is a Delta Air Distribution Unit (ADU)?

Delta's Air Distribution Unit (ADU) is designed to address this problem. Its air supply capacity of up to 1000 CFM assists in the delivery of cold air to the cabinet location where greater heat dissipation is required, to remove hot spots. Delta's ADU is easily attached to dedicated raised floors.

How does cabinet air work?

A small portion of the air flows around the servers (referred to as 'cabinet air') and ascends toward the top of the cabinet under the influence of the thermal plume generated by the servers (average velocity in the z-direction (m/s) / average velocity in y-direction (m/s) = 0.65), creating a temperature gradient in the vertical direction.

How does a remote air distribution unit (ADU) work?

However, as the cold air is delivered to a remote rack, air flow is reduced. Raised floors are often laid with cables and pipes that hinder the delivery of cold air and result in major hot spot issues. Delta's Air Distribution Unit (ADU) is designed to address this problem.

How does air cooling work in a data center?

Currently, air cooling remains the dominant cooling approach for data centers, operating by delivering cold air to equipment and exhausting heated air to complete heat exchange.

The cabinet is designed specifically to protect it from human damage, water, dust and other damages. The cabinet allows natural wind cooling through filtered vents on front door and under lip of rain hood

Outdoor integrated cabinet is well suited for power equipment, batteries, telecom gear, all integrated into a robust, economical package. The cabinet contains internal mounting rails, which allow installation ...

Ideal for telecom base stations, wireless backhaul, and fiber distribution nodes, the cabinet ensures safe and stable operation in harsh weather, with flexible configurations for power, battery, and network ...

HuiJue's air-cooled cabinet designs ensure balanced airflow, energy efficiency, and dependable protection, making them the preferred choice for telecom, energy, and automation industries worldwide.

Air-cooled distribution cabinet cabinet base station

This study aims to address the challenges associated with air distribution in data center cabinets and investigates the backplane fan exhaust patterns and blind plate configurations in ...

Cytech cabinet AC unit provides efficient DC cooling for telecom enclosures, BESS battery cabinets and outdoor industrial equipment. Reliable performance for mission-critical systems.

Delta's Air Distribution Unit (ADU) is designed to address this problem. Its air supply capacity of up to 1000 CFM assists in the delivery of cold air to the cabinet location where greater heat dissipation is ...

Constructed from high-strength galvanized steel and rated IP55, it offers reliable protection in harsh environments. The cabinet features a standard 19-inch rack, DC distribution unit, grounding copper ...

The Telecom Container Air Conditioner (TCCA) is a modular dedicated air conditioner unit designed to meet the increasing heat load density in places like 5G base stations and communication equipment ...

Outdoor Industrial Cabinet Air Conditioner: Purpose-built for industrial automation systems, this unit delivers dependable thermal management for outdoor electrical enclosures exposed to severe ...
