Can battery energy storage systems improve power system flexibility?

Recently, Vietnam's National Power Transmission Corporation (EVNNPT) shared that it is looking into Battery Energy Storage Systems (BESS) among several technology options as an appropriate solution. This technology can enhance power system flexibility and enable high levels of renewable energy integration.

Does Vietnam have a power shortage?

Vietnam's total power demand is expected to grow 10% annually during the period 2021-2024, and power shortages are expected to increase in different regions of the country.

Will there be a power shortage in Vietnam in 2021?

It has been estimated that there will be a power shortage of nearly 400 million kWh in 2021, and it will reach a peak of 13.3 billion kWh in 2023, according to the report of Electricity of Vietnam (EN).

Could BESS be useful for a country like Vietnam?

As an example of how BESS could be useful for a country like Vietnam, currently the country has approximately 320 solar power projects (with a capacity of 34,000 MW) and 300 wind power projects (with a capacity of about 74,000 MW) proposed to be fed into the National/Provincial Power Development Plan between 2021 and 2023.

- As Vietnam accelerates the development of wind and solar power under Power Development Plan VIII (PDP8), the national power system is facing rising demands for flexibility, ...

This monumental increase, from just 300MW to at least 10GW, is the first time Vietnam has set a serious, actionable goal for energy storage. It's a testament to government's strategic ...

In this process, energy storage systems are not only a technological solution but also an essential component to ensure power system stability, optimize renewable energy sources, and ...

As Vietnam moves into 2026, stakeholders believe the country is well positioned to advance its next cycle of pilot projects, strengthen regulatory frameworks, and set a regional ...

# Benefits of distributed energy storage in vietnam

Vietnam's energy landscape is undergoing a seismic shift. With surging electricity demand and ambitious renewable energy targets, distributed energy storage systems (DESS) are emerging as a ...

Along with the increasing role of renewable energy in energy security, energy storage solutions are increasingly of interest and Vietnam is no exception. Energy storage in its most ...

One of the most promising solutions is harnessing the potential of Distributed Energy Resources (DERs), including utility-scale solar, rooftop solar (RTS), and battery energy storage ...

Vietnam is seeking greater energy efficiency, improved transmission, and alternative fuels for its energy storage sector.

As Vietnam continues to grow, these benefits will become increasingly important environmentally responsible. BESS can also improve the quality of life for Vietnamese citizens by ...

Accelerating the adoption of DERs, such as RTS and battery storage, Vietnam can leverage household and individual investment to increase new capacity in the power system and reduce capacity shortfall.
