---

The revised Energy Performance of Buildings Directive will speed up the uptake of solar photovoltaics and solar thermal - both on residential and non-residential buildings - and increase the possibilities ...

By December 31, 2026: All new public and non-residential buildings with a useful floor area larger than 250 m<sup>2</sup>; must be equipped with solar energy installations.

In this scenario, European policymakers adopt an ambitious - and expensive - industrial policy to build up a potent domestic industrial base for making solar photovoltaics and markedly ...

Energy efficiency should come first, reducing overall energy demand through high-performing building envelopes and efficient equipment. Next, buildings can be equipped with solar ...

The United Nations has urged countries to accelerate the transition to an affordable, reliable, and sustainable energy system by investing in renewable energy resources, prioritizing ...

Carbon-neutral strategies have become the focus of international attention, and many countries around the world have adopted building-integrated photovoltaic (BIPV) technologies to ...

In developing countries, the share of building energy consumption is smaller, but given population growth, urbanization, and rising demands for building services and comfort, the sharp rise ...

The EU is advancing solar energy integration in buildings through a revision of the EPBD. From 2026, new constructions must be designed to accommodate solar installations, while ...

To contribute significantly to reducing greenhouse gas emissions, new buildings should be designed, and existing buildings should be energetically renovated so that high solar thermal and solar ...

## **Buildings in china and europe should be equipped with solar energy systems**

From 2026, new constructions must be designed to accommodate solar installations, while public and commercial buildings undergoing major renovations will be required to include solar systems from 2028.
