Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

Despite these headwinds, solar and energy storage still accounted for 82% of all new power added to the U.S. grid during the administration's first six months. This outcome shows that no ...

When combined with storage, 82% of new capacity in H1 2025 came from solar or solar plus storage. This trend signals that solar is firmly mainstream, with utilities, businesses, and ...

In this blog, we'll cover what is driving the unprecedented growth of the energy storage sector, address challenges the industry needs to navigate, and show how energy storage unlocks ...

In 2026, developers are likely to accelerate solar-plus-storage to serve hyperscaler demand, diversify revenue to manage volatility, and position early in long-duration and distributed storage for the next ...

The landscape of energy in the United States is undergoing a significant transformation, with solar power and energy storage poised for remarkable growth by 2025.

In 2024, 91% of new renewable projects offered cheaper electricity than the lowest-cost, new-build fossil fuel alternative. The cost of battery energy storage systems for grid applications also ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Energy storage systems, mostly large batteries, are important because they help store solar and wind power for use when the sun isn't shining or the wind isn't blowing. In 2025, over 31 ...

Do energy storage and solars still have prospects

This article analyzes whether the energy storage industry has the potential to replicate the rapid growth of solar and wind power from four perspectives: industry evolution, policy drivers, ...
