While some regions of the United States have made progress integrating energy storage into energy resource portfolios, several organized electricity markets have yet to unlock the benefits ...

The removal of storage mandates in China for renewables and the absence of offsetting drivers were big concerns. However, a new energy storage target was set in September, underlining ...

The development of advanced materials and systems for thermal energy storage is crucial for integrating renewable energy sources into the grid, as highlighted by the U.S. Department of ...

In December 2020, DOE released the Energy Storage Grand Challenge (ESGC), which is a comprehensive program for accelerating the development, commercialization, and utilization of ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids.

In 2023, the International Renewable Energy Agency (IRENA) research predicted that by 2030, the need for energy storage would have nearly tripled.

In December 2020, DOE released the ESGC Roadmap, the Department's first comprehensive energy storage strategy to develop and domestically manufacture energy storage technologies that can ...

Battery energy storage projects have emerged as the dominant force in Australia's energy investment landscape, accounting for 46% of the nation's 64GW development pipeline, according to the ...

Even with near-term headwinds, cumulative global energy storage installations are projected to be well in excess of 1 terawatt hour (TWh) by 2030. In this report, Morgan Lewis lawyers outline some ...

Energy bureau recommends new energy storage

The Department of Energy's (DOE) Energy Storage Strategy and Roadmap (SRM) represents a significantly expanded strategic revision on the original ESGC 2020 Roadmap.
