Solar power and battery storage are expected to lead new U.S. generating capacity additions in 2025, according to the Energy Information Organization (EIA). The EIA expects 63 ...

The first half of 2025 proves that solar and storage can thrive even in difficult circumstances. They are dominating new power additions, driving domestic manufacturing, and ...

Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity.

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Clean energy momentum builds as solar and wind outpace global electricity demand growth Solar and wind are now expanding fast enough to meet all new electricity demand, a ...

Of the 11.7 GW of clean power capacity added in Q3 2025, utility-scale solar and battery energy storage accounted for 91% of the total, said a report from the American Clean Power ...

Many utilities have embraced gas, or promoted restarting closed coal or nuclear plants, but that overlooks the cheapest and fastest-to-build option - solar energy combined with battery ...

The landscape of energy in the United States is undergoing a significant transformation, with solar power and energy storage poised for remarkable growth by 2025.

In 2025, the solar-plus-storage equation has fundamentally shifted. Plummeting battery costs, expanding revenue opportunities, and increasingly sophisticated AI-driven management ...

In 2025, the country is expected to add about 97 gigawatts (GW) of new electricity capacity. Most of this

Energy storage plus solars in 2025

growth will come from solar power and energy storage, showing strong ...
