Altogether, the US has added over 20 gigawatts of battery storage capacity to its electric grid since 2020, according to recent data from the Energy Information Administration (EIA).

1.1 Background As energy systems evolve from fossil fuels to renewable resources, battery storage resources are playing an increasingly important role in maintaining the flexibility and ...

China, which requires batteries to be installed at new solar or wind farms, overtook the US as the world's biggest energy storage market in 2023 and was expected to add 36 gigawatts of ...

The U.S. is set to plug over 18 gigawatts of new utility-scale energy storage capacity into the grid in 2025, up from 2024 's record-setting total of almost 11 GW, per Energy Information ...

California now has nearly 17,000 megawatts of battery storage -- one-third of the way to its 2045 goal -- transforming how the state powers a reliable grid and robust economy, while proving ...

US battery storage hits record 5.6 GW in Q2 2025, led by utility-scale growth, but sourcing rules may slow future gains.

As countries and industries seek to balance intermittent renewable energy sources, battery storage emerges as a critical component in ensuring grid stability and reliability.

In 2025, capacity growth from battery storage could set a record as operators report plans to add 19.6 GW of utility-scale battery storage to the grid, according to our January 2025 ...

After record growth in 2024, U.S. battery energy storage systems (BESS) could grow from more than 26 gigawatts (GW) of capacity--enough to power 20 million homes--to anywhere from ...

The United States has decisively surpassed its aggressive 2025 target for grid-scale battery storage, crossing

Gigawatts of energy storage batteries

40 gigawatts of installed capacity in the third quarter of 2025.
