Rapid growth in battery storage capacity The substantial investments in grids and storage are set to drive remarkable growth in global battery storage power capacity.

The battery energy storage market continues its rapid growth, reshaping power systems worldwide. After a historic 2025, when global BESS capacity surpassed 250 GW and overtook ...

Regional dynamics demonstrate energy storage markets reaching maturity. Explore this evolution and our analysis of the key global themes to watch in the year ahead.

Globally, annual energy storage deployment (excluding pumped hydropower plants) is set to hit another all-time high at 92 gigawatts (247 gigawatt-hours) in 2025 - 23% higher than in 2024. ...

Estimates indicate that global energy storage installations rose over 75% (measured by MWhs) year over year in 2024 and are expected to go beyond the terawatt-hour mark before 2030.

Demand for energy storage continues to escalate, the global battery energy storage (BESS) landscape is poised for significant installation growth and technological advancements.

Our new ranking of the top global markets for BESS investment can guide strategies, and four factors can help potential investors frame their approach. The US, China Mainland and Germany take the ...

Strong growth occurred for utility-scale battery projects, behind-the-meter batteries, mini-grids and solar home systems for electricity access, adding a total of 42 GW of battery storage capacity globally.

Global battery energy storage (BESS) investment reached \$65.6 billion in 2024, driven by falling battery pack prices and surging demand for reliable, flexible clean energy solutions.

The global battery energy storage system (BESS) market is experiencing strong growth due to multiple

Global battery energy storage investment

converging factors. Increasing integration of renewable energy sources, such as solar and wind, ...
