Is Kazakhstan a good place to invest in solar power?

Kazakhstan has remarkable solar potential with a very well-designed auction system, a clear renewable capacity addition schedule, and a solid decarbonisation target. The country is now also including storage systems as part of its public procurement strategy in a move that will ease further integration of renewables into the grid.

How many solar power plants are there in Kazakhstan?

Solar Power: The potential of solar energy in Kazakhstan is estimated at 2.5 billion kWh per year. Solar energy can be widely used in two-thirds of Kazakhstan's territory. The government aimed to put 28 solar power plants into operation by the end of 2021, and met this goal, with currently 51 solar power plants in operation.

How big is solar capacity in Kazakhstan?

Back in 2015, Astana was predicting installed solar capacity by the end of 2020 to reach 714 MW. A government report last month said solar capacity had reached 467 MW. Indeed, renewables are still small fry in Kazakhstan. Today solar accounts for 56 percent of the country's total renewable capacity.

What is Kazakhstan's largest solar project?

Kazakhstan's largest solar project - a 100 MW field in Saran, Karaganda Province - was opened last year by a German company, also with EBRD backing. Russian engineers doubled capacity at the EBRD-backed Burnoye plant in Zhambyl in 2018.

For Kazakhstan, with its vast, sun-drenched territories, solar energy presents a massive, largely untapped opportunity. Harnessing this potential on a national scale involves more than just ...

It is reported that the project plans to construct a 300 MW photovoltaic system and a 90 MW/360 MWh energy storage system. Upon completion, it is expected to provide approximately 674 ...

Discover how energy storage systems are transforming Kazakhstan's power generation landscape while addressing renewable intermittency challenges.

As we approach Q4 2025, all eyes are on the 500MW solar+storage tender in Almaty Region. This project

could set new benchmarks for LCOE (Levelized Cost of Energy) in Central Asia--potentially ...

Currently, Kazakhstan operates a 7.5-megawatt (MW) pilot energy storage system at a substation in Kokshetau. The facility is being used to test how storage systems interact with the grid.

The focus now is on leveraging solar's comparative advantages to drive forward Kazakhstan's decarbonisation and harness its significant solar resources. This report builds on the ...

This article delves into the progress made in Kazakhstan's renewable energy landscape, focusing on generation capacity, legislative changes, and ongoing efforts to address energy storage ...

ASTANA - Kazakhstan's renewable energy sector demonstrated steady growth in 2024, though energy storage systems remain a key challenge, said experts during a roundtable discussing ...

By 2025, the country plans to commission 455.5 MW of new renewable capacity through 35 projects, including 20 solar plants, 13 wind farms, and two hydroelectric facilities, underscoring a ...

Chinese renewable energy tech company Envision has begun building a factory for wind turbines and energy storage systems (ESS) in Kazakhstan.
