Soft, malleable, and easy to work with, lead melts with modest heating, it resists corrosion, and it lasts a long time. Those features have made it ideal for fashioning everything from bullets and guns to pipes ...

Lead (pronunciation: LED) is a soft, malleable, and ductile element having a high corrosion resistance, denoted by the chemical symbol Pb. A poor conductor of electricity, it slowly forms a dull coating ...

This page provides basic information on lead including what it is, where it is found, how one can be exposed, and the health effects associated with lead.

Lead is both a noun and a verb, as most people know. There are several unrelated nouns spelled lead: one most commonly refers to a metal (as in, "The paint was made with lead"), and the other most ...

Lead is a naturally occurring, soft, bluish-gray heavy metal. Although nearly 50% of lead used today comes from recycled materials such as car batteries, its most common source is the mineral Galena ...

Lead, a metal found throughout the earth, has been used in a variety of products including gasoline, paint, plumbing pipes, ceramics, solders, batteries, and even cosmetics. It ...

Lead is a metal found naturally in the earth's crust. It can be found in all parts of our environment, including air, water, and soil. Lead can combine with other chemicals to make different compounds. ...

Lead is a naturally occurring toxic metal found in the Earth's crust. Its widespread use has caused extensive environmental contamination, human exposure and significant public health ...
