A liquid is one of the states of matter. The particles in a liquid are free to flow. So, it has a definite volume, but not a definite shape.

A liquid is one of the three main states of matter, along with solids and gases. It is made up of tiny particles, such as ions or molecules, that are close together but not as tightly packed as in solids.

A liquid is composed of atoms or molecules held together by intermolecular bonds of intermediate strength. These forces allow the particles to move around one another while remaining closely packed.

liquid adjective (MONEY) in the form of money, rather than investments or property, or able to be changed into money easily:

Examples of liquids include water, oil, and blood. A liquid is a state of matter that has a definite volume, but no fixed shape. In other words, a liquid takes the shape of its container. Liquids ...

One of four main states of matter, composed of molecules that can move about in a substance but are bound loosely together by intramolecular forces. Unlike a solid, a liquid has no fixed shape, but ...

Liquid, in physics, one of the three principal states of matter, intermediate between gas and crystalline solid. The most obvious physical properties of a liquid are its retention of volume and ...

The meaning of LIQUID is flowing freely like water. How to use liquid in a sentence.

The following figures show the microscopic behavior of the atoms in liquid argon and the molecules in liquid bromine and liquid water. Note how the molecules in a liquid move as units.

Liquid is a vibrant liquor store located in Brandon, FL, offering a diverse selection of wines, spirits, and craft

Liquid flow batteries and all-vanadium liquid flow electrolytes

beers. With a friendly staff ready to assist, customers can easily find their favorite brands or ...
