Sodium acetate trihydrate (SAT), which has high energy storage density and high thermal conductivity, is an important phase change material (PCM) for thermal storage.

Sodium acetate trihydrate (SAT) is considered a good candidate of heat storage material due to its high heat storage density, low cost, nontoxicity and the capability to be flexible.

Requirements for sodium acetate in energy storage equipment

For this goal, typical sodium acetate trihydrate salt (SAT) was used due to its long-term latent heat-preserving ability, which has made it the subject of thermal energy storage devices.
