-----

Multiple cabinets can be directly connected in parallel to expand the capacity of the energy storage system and allow plug-and-play.

With the patented technology of virtual synchronous machine features, it can realize the function of multiple remote free parallels without communication lines and off-grid switching;

This product is mainly used for distributed grid-connected power generation systems and small and medium-sized commercial photovoltaic power generation systems. It is connected in series between ...

The container-type integrated design realizes "plug and play", and installation and commissioning can be completed on site in just 4 hours, which shortens the construction period by 50% compared with ...

Whether retrofitting existing infrastructure or building a decentralized energy network, this cabinet empowers businesses to cut costs, enhance sustainability, and ensure uninterrupted power.

100kW/215kWh LFP energy storage system, and a generator set. The hybrid energy storage system adopts integrated design, the battery and the MPS series hybrid inverter, which contains PCS ...

Available in both 100kWh and 215kWh capacities, this modular system integrates power modules, batteries, cooling, fire protection, and environment monitoring in a compact outdoor cabinet.

A heavy - duty microgrid cabinet built to meet extreme power demands. It boasts a battery voltage of 832V, a grid - connected output of 330kW, and a maximum PV input of 4750A. It supports remote ...

Fully integrated, outdoor NEMA 3R and NEMA 4X nanogrid and microgrid cabinet systems. Configurable with internal power conversion and power distribution and energy storage or energy ...

Grid connected cabinets can connect energy storage systems (such as lithium-ion battery energy storage) to the power grid, achieving charging and discharging control of the energy storage system.
