-----

In just a few months, Spain has green lit more than 65 GW of solar projects that launched new hydrogen and battery storage pilots in order to increase its backing of global fusion research. It ...

Encouraged by EU climate goals and public support, Spain set its sights on achieving near-total decarbonization of its grid by 2030. However, the unexpected blackout in May 2025 ...

The Iberian Peninsula's widespread blackout raises questions about the resilience of the electric power infrastructure in the two countries -- and to an extent, the rest of Europe.

The rapid expansion of intermittent solar power is also placing immense technical strain on the national grid. An April 2025 blackout served as a stark wake-up call, exposing vulnerabilities in ...

Solar power, abundant but lacking grid inertia, couldn't stabilise frequency when demand shifted suddenly. Weak interconnections with Europe's broader grid limited backup options, and an ...

In 2024, solar PV added 15.3 billion euros to Spain's GDP and supported 146,764 jobs across the value chain. "We are the country of sunshine precisely when solar energy is most ...

Spain's grid -- once designed around a small number of large fossil fuel and nuclear plants near urban centers -- is now stretched by thousands of small, intermittent renewable plants ...

At some times in spring, as much as 60 per cent of Spain's electricity comes from the sun. That has enabled Spain to slash its use of gas and coal-fired power stations. Consumers have ...

Spain installed 1.14 GW of solar capacity for self-consumption in 2025, lifting cumulative capacity to 9.3 GW, as residential and commercial installations declined while industrial and off-grid ...
