They transform solar-sourced DC into AC and store unused energy in high-performance battery packs, providing clean, renewable backup energy to mission-critical telecom equipment.

Since solar power systems provide DC current, DC outputs for DC loads are more efficient.

EK-SG-D03 series outdoor communication energy cabinet is designed for remote communication base stations and industrial sites to meet the energy and communication needs of the sites.

Designed for remote locations, it integrates solar controllers, inverters, and lithium battery packs to ensure stable and continuous power for telecom equipment, surveillance systems, and off-grid ...

Ideal for industrial communications, security and other applications using DC electricity generated solar to power AC-based systems up to 300W with 600W peak/surge power.

Think of it as a solar power station in a box hardy enough to brave the outdoors, smart enough to keep telecom equipment online, and green enough to keep your ESG officer happy.

By using solar energy, they cut down on fossil fuel use and offer a greener energy choice. The main job of a telecom battery cabinet is to keep batteries safe and working well.

As one of our highlights, the integrated energy cabinet integrates multiple functions such as power distribution, environment monitoring and safety protection into one, providing a full range of energy ...

The communication base station installs solar panels outdoors, and adds MPPT solar controllers and other equipment in the computer room. The power generated by solar energy is used by the DC load ...

A solar power inverter and battery system gives steady power to telecom cabinets, keeping them running

The function of the battery adapter of the solar-powered communication cabinet

during power outages. Using solar energy lowers the need for fossil fuels, ...
