In 2023, approximately 45% of battery capacity and 26% of utility-scale PV capacity were hybrid PV/battery energy storage system projects--relatively consistent with previous years.

In 2024, 24 states and territories generated more than 5% of their electricity from solar, with California leading the way at 32.4%. The United States installed approximately 31.1 GWh (12.3 ...

Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

Depending on the data, this can include standardizing country names and world region definitions, converting units, calculating derived indicators such as per capita measures, as well as ...

Solar and wind energy continued to dominate renewable capacity expansion, jointly accounting for 96.6% of all net renewable additions in 2024. And 2024 marks the highest annual increase in ...

This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest capacity installation in a single year since 2002. Together, solar and battery ...

Find the latest statistics and facts on energy storage.

A comparison of the solar power status among countries and territories has been provided, considering their concentrated solar power and PV installed capacities for each continent.

Solar and energy storage accounted for 84% of new electricity generation capacity added to the U.S. power grid last year, but the industry faces a challenging future with the new U.S....

So far in 2025, 40% of new residential solar installations were paired with storage, as changes to incentive

The proportion of solar installed capacity and energy storage

programs and net metering structures have encouraged customers to use batteries to more ...
