Who regulates electricity in Vietnam?

The Directorate General of Electricity and Renewable Energy (EREA), under the MOIT, is responsible for overall energy planning and policy. The Electricity Regulatory Authority of Vietnam (ERAV), which is responsible for establishing and supervising the power market, power planning, tariff regulation and licensing.

What is Vietnam's electricity mix?

Vietnam's electricity mix includes 48% Coal, 31% Hydropower and 8% Solar. Low-carbon generation reached a record high in 2024.

Why does Vietnam maintain a monopoly of electricity transmission grids?

The Vietnamese Government maintains its monopoly of electricity transmission grids to ensure the national energy security. Vietnam's existing energy infrastructure is inadequate with weak grid capacity, which obstructs the integration of new capacity, particularly from renewable energy projects.

Is hydro power a resurgence in Vietnam?

Notably, hydro has also seen a resurgence, particularly in 2022 and 2024, reaffirming Vietnam's resilience and capability to harness clean energy to meet its growing electricity demands while minimizing its carbon footprint. Vietnam's electricity mix includes 48% Coal, 31% Hydropower and 8% Solar.

The plan proposes to continue the expansion of a 500kV transmission system to transmit power from power source centers in the central and southern regions to larger load centers in Ho Chi ...

In addition to offshore wind and solar, projects on LNG power, small hydropower, and biomass energy from planted forests and agricultural waste are being promoted, painting a picture of diverse, ...

The Ho Chi Minh City Energy Storage Project demonstrates Vietnam's commitment to sustainable urbanization. By balancing cutting-edge technology with practical implementation strategies, this ...

An analysis was conducted on Vietnam's energy mix in 2023, including the examination of power plant capacities and the volume of energy production from fossil sources (coal, gas, oil) and renewable ...

# Vietnam ho chi minh energy system parameters

The overall project goal was to reduce intensity of GHG emissions from the building sector nationwide by improving the energy use of commercial and high-rise residential buildings in Vietnam.

This study assesses the public's willingness to pay (WTP) for increasing renewable energy share and corresponding motivating factors in Ho Chi Minh City, Vietnam.

Aug 2, 2023 &#183; Renewable energy sources are acknowledged for Ho Chi Minh City's significant contribution to environmental protection and sustainable development.

This study develops a system of urban energy transition indicators and a corresponding evaluation framework using an expert-based composite indicator method for cities/countries with high ...

Vietnam's electricity mix includes 48% Coal, 31% Hydropower and 8% Solar. Low-carbon generation reached a record high in 2024.

This article explores the significant potential, inherent opportunities, and prevailing challenges associated with integrating clean energy sources within Ho Chi Minh City's urban landscape.
